

Project Sprint Planning Notes

Team: Group-P09-02:

Sprint: 1

Date: 03/09/2024

Attended:

Scrum Master: Sruthy Thrikkadikkunnath Ramesh

Product Owner: Jyothi Kundu

Development team: Ankita Nag Ayshi, Ethan Siolis, Allegra Lipscombe, Sukhman Singh, Wendy Uyen Vo

1. Goal

This sprint is all about building the core features of our VetCare system, focusing specifically on booking appointments and accessing medical records. By the end of this sprint, we aim to have these main features in place so users can start interacting with the system.

2. Duration of the sprint

Start Date: 26/08/2024

End Date: 23/08/2024

Total Duration: 3 weeks

3. What is the team's vision for this sprint?

For this sprint, the plan is to tackle 2 big epics each week:

- Week 1: We will focus on enabling users to book appointments and access medical records.
- Week 2: We will be focusing to user login, account creation, and prescription management.
- Week 3: The final week will be dedicated to educational resources and fully integrating all the components we have built.

This will be a functional version of the application, though we'll continue refining and improving it in future sprint. We'll stay in touch regularly via meetings and team chats. If anyone runs into any challenges, we'll collaborate to resolve them.

- Back-end: Ankita, Sruthy, and Sukhman
- Front-end: Wendy, Ethan, and Allegra

Testing will be done together, ensuring everything works as expected. By the end of the milestone, we plan to have a fully functional website with all necessary features, and we'll make further improvements in the next sprint.

4. Estimation in story points

We've assigned story points to the tasks based on their complexity and scope:

- Book an appointment: 8 points
- Access medical records: 8 points
- User login and account creation: 5 points
- Manage pet prescriptions: 5 points
- Educational resources: 3 points
- Final integration: 5 points

Booking appointments and accessing medical records are more complex due to the database integration and validation required, so they've been assigned 8 points each. User login and prescription management, while important, are simpler, so they get 5 points each. Educational resources and final integration are more straightforward, so they're assigned 3 and 5 points respectively.
